Square Recess
Torx® Tamper Resistant

Bordo's premium screwdriver bit range has now been released to the Australian market.

This comprehensive range includes insert bits, power bits, double-ended bits, nutsetters, and magnetic holders. All items in the range are manufactured in carefully controlled and monitored conditions to German DIN standards. All insert bits, power bits and double-ended bits are made of S2 steel with hardness rating of 58-60 Rc.

Nutsetters

Bordo's range of nutsetters are manufactured from shock resistant tool steel then heat treated and tempered for long life and maximum performance. All nutsetters feature a 1/4" hex shank with power groove and 5/16" nutsetters are engineered to suit most painted and coated screws.

Quality

Every shipment is batch tested to ensure our stringent quality requirements are met. Bits are checked against the master dies to ensure they are the correct shape and size and nutsetters are checked for depth and sizing using go-no-go gauges. Rockwell hardness and torque shear tests are also performed on every batch.

As with all Bordo products our screwdriver bit range reflects our promise of Quality without Compromise and adds to one of the most complete power tool accessory ranges in Australia.

Phillips® and Pozidriv® are registered trademarks of the Phillips Screw Company. Torx® is a registered trademark of the Camcar division of Textron. Grippa® is a registered trademark of Bordo International Pty Ltd.

Grippa®

Bordo's Grippa bit features precision ribbed faces which provide extra grip in the screw recesses to minimise "camout". Ideal for burred, corroded, painted, brass and stainless steel screws. With ribs on all faces these bits provide superior performance when installing and removing screws.
