

SDS Plus Rotary Hammer Drill
Triple Edge Solid Tungsten Carbide Head

DELTAGON®

Exceptional Performance Drilling Bondek®
Extreme Performance in Reinforcing Mesh & Bar
Improved Anchor Performance

Bordo's range of Deltagon SDS Plus drill bits offer outstanding performance in a wide variety of masonry drilling applications. Deltagon bits offer specific advantages over standard SDS Plus bits:

- High durability and improved drilling speed.
- Tungsten carbide head is permanently bonded to shank – not brazed. This results in extended bit life by eliminating bit failure due to excessive heat melting brazing material.
- Drills through reinforcing mesh and reinforcing bar.
- Minimised bit binding against reinforcing bar – increasing operator safety.
- Easily drills through all typical steel decking plate including Bondek®.

- Eliminates rifling - drilling holes close to perfect roundness.
- Extremely round holes result in improved fastener performance by increasing pull out loads.
- More accurate hole starting without bit walk.
- Limited circumferential wear.
- Reduced vibration minimising operator fatigue.
- Extremely hard wearing for long tool life.
- Triple thread shank for improved dust extraction.
- The Delta Shank, on small size Deltagon drills, has a triangular cross section and provides exceptional resistance to bending. The Delta Shank provides efficient dust extraction without the need for conventional flutes (sizes 6mm and smaller).

Bondek® is a registered trademark of BlueScope Steel Limited.
Deltagon® is a registered trademark of Kabushiki Kaisha Miyanaga.

Deltagon SDS-Plus Masonry Bits easily drill through Bondek® steel deck plate. Superior hole roundness results in increased anchor performance.

Deltagon SDS-Plus Masonry Bits minimise bit walk during hole starting.
